

the Earth is traveling in orbit.

At 18.516878 miles per second and it takes the light 477.34807 seconds to reach Earth comes to 8,838.996 miles per second lost through the dimensional change.

194,826.39 subtract 8,838.996 = 185,987.39 miles per second light is traveling to Earth. A difference of 12.609985 miles per second between what the Ancients say is the speed of light as compared to what the White Man says.

This same Ancient knows the correct speed of TIME from this simple calculation. 194,826.39 times 181 = 35,444.577 miles per second

93,000,000 divide by 35,444,577 = 2.6238146 seconds. The white man tries to call this, a natural number stating that a tangent to a slope of having 1.33511 equaling the natural number E as 2.7182818.

All ancient cultures deal in TIME first then tangents or slope.

This is just on the subject of a day having 24 hours and the Tribal equation and formula being omitted which is still part of the same subject.

At 18.516878 miles per second and it takes the light 477.34807 seconds to reach Earth comes to 8,838.996 miles per second lost through the dimensional change \_

194,826.39 subtract 8,838.996 185,987.39 miles per second light is traveling to Earth. A difference of 12.609985 miles per second between what the Ancients say is the speed of light as compared to what the White Man says.

This same Ancient knows the Correct speed of TIME from this simple calculation.  $194,826.39 \times 181 = 35,444.577$  miles per second

$93,000,000$  divide by  $35,444.577 = 2.6238146$  seconds. The white man tries to call this, a natural number stating that a tangent to a slope of having 1.33511 equaling the natural number E as 2.7182818.

All ancient cultures deal in TIME first then tangents or Slope.
