CREATOR exist within a set number of strands or currents of TIME.

From before Julius Caesar's time to the present, no one has been able to translate why all Ancients calculated one full day as $15\frac{1}{12}$.

Lets use a little common sense with this figure. $15\frac{1}{12}$ comes to 181 units of ancient time.

If we take 24 hours or 1440 minutes and divide by 181, this equals to 7.9558011 minutes of civilized time for every unit of Ancient TIME.

$7.9558011 \times 180 = 1,432.0442$ minutes or 23.867403 hours
plus 7.9558 minutes or $.132597$ hours = 24 hours.

$.1104972 \times 24 = 2.6519337$ seconds the speed of TIME or one strand
or current of TIME.
 $2.6519337 \times 180 = 477.34806$ seconds $\times 181 = 24$ hours (American Indian)
 $.1104972 \times 13 = 1.4364636$ seconds
 $2.6519337 \times 8 = \frac{21.215469 \text{ seconds}}{499.9999999 \text{ seconds}} \times 2.88 = 24$ hours. (white man)

Now what could be reason, so much of the American Indian culture is given to TIME? When this Ancient People remark: INDIAN TIME!, everyone knows it is a different TIME, but what kind?

Let me give an example! For the White Man's 7 Sunlight days having 168 hours, the American Indian has only 167 hours, 7 minutes for the same period of TIME. A difference of 53 minutes less. In the course of one year, the American Indian has less TIME for the same period by one day, 21 hours, and 56 minutes. If the debate on the speed of light comes in, there is even less TIME by 2 hours, 17 minutes, and $25\frac{1}{3}$ seconds.

In TIME alone, there is a difference of 2 days, 23 minutes, and 52 second

CREATOR exist within a set number of strands or currents of TIME.

From before Julius Caesar's time to the present, no one has been able to translate why all Ancients calculated one full day as 151/12.

Lets use a little common sense with this figure. 151/12 come-S to 181 units of ancient time.

440 minutes and divide by 181, this equals

If we take 24 hours or 1

to 7.9558011 minutes of civilized time for every unit of Ancient TIME.

$7.9558011 \times 180 = 1,432.0442$ minutes or 23.867403 hours

' plus 7.9558 minutes or .132597 n@urS= 24 hours.

_ 1104972 X 24 = 2.6519337 seconds the speed of TIME or one strand

or current of TIME. $2.6519337 \times 180 \cdot 477 = 34806$ seconds X 181 24 hours (American Indian)
.1104972 X 13 = 1.4364636 Seconds $2.6519337 \times 8 = 21.215469$ seconds

II
