

Now, from Julius Caesar's time to the present, every civilized Antiquity Scientist and Scholar has known that the Ancients had a formula on how TIME created LIGHT, even though they never understood it.

The Ancients discovered that TIME traveled or moved in a set manner, unlike the civilized who believed TIME was a reference point only to any given event. These Ancients invented a device which tracked TIME from the Sun to Earth, when drawn out appeared like a giant Snake coiling on its journey, hence came the term: SERPENT or SERPENT PEOPLE.

Also in these Ancient writings, the formula to the cycle of time was translated. 3,000(unknown) so they used the term YEARS. The calculations for one full day was 15(unknown) and $\frac{1}{12}$ of an Atom. The reason they used years was because they translated 181 parts. In civilized thinking because of 181 parts, the 3,000 unknown had to be years, because 181 parts is pretty close to half a civilized year.

So, let's explain what it really means. Let's take the $\frac{1}{12}$ of an Atom and if we multiple $15 \times 12 = 180$ plus $1(\frac{1}{12}) = 181 \frac{1}{12}$ Atoms. So one complete civilized 24 hour day was $181 \frac{1}{12}$ Atoms to the Ancient.

$3,000 \div 15.08333 = 198.89507$ days. This was the cycle of TIME but not for LIGHT.
 $3,000 \div 15 = 200$ days. This was the cycle of LIGHT.

Now I must explain the Arab Barter System because to find the cycle for LIGHT, the equation for TIME was used and the cycle of TIME, the equation for LIGHT was used.

$24 \text{ hrs. (civilized)} \div 181(\text{Ancient}) = .13259669 \times 60 = 7.9558014$ minutes (civilized)

$7.9558014 \times 180(\text{TIME}) = 1432.0443 \div 60 = 23.867405$ hours. Time
 $7.9558014 \times 181(\text{LIGHT}) = 1440.0001 \div 60 = 24.00002$ hours. Light

So, to get a determined duration on TIME you multiply by the TIME equation, but divide by the LIGHT equation to get the same answer.

Antiquity Scientist and Scholar' has known that the Ancients had a formula on how TIME created LIGHT, even though they never understood it.

The Ancients discovered that TIME traveled or moved in a set manner', unlike the civilized who believed TIME was a reference point only to any given event. These Ancients invented a device which tracked TIME from the Sun to Earth, when drawn out appeared like a giant Snake coiling on its journey, hence came the term: SERPENT or SERPENT PEOPLE.

Also in these Ancient writings, the formula to the cycle of time was translated. 3,000(unknown) so they used the term YEARS. The calculations for one full day was 15(unknown) and 1/12 of an Atom. The reason they used years was because they translated 181 parts. In civilized thinking because of 181 parts, the 3,000 unknown had to be years, because 181 parts is pretty close to half a civilized year.

So, let's explain what it really means. Let's take the 1/12 of an Atom complete civilized 24 hour day was 181 1/12 Atoms to the Ancient.

$3,000 \div 15.08333 = 198.89507$ days. This was the cycle of TIME but

not for LIGHT. $3,000 \div 15 = 200$ days. This was the Cycle of LIGHT.

Now I must explain the Arab Barter System because to find the cycle for LIGHT, the equation for TIB@ was used and the cycle of TIME, the equation for LICHT

So, to get a determined duration on TIME you multiply by the TIE/IE equation, but divide by the LIGHT equation to get the same answer.
