

and 35.8 seconds, but that's way ahead of the concept, and this figure is for TIME only and does not include LIGHT.

But the destruction of Ancient records have been so successful that rituals and legends become the only source of correction. You do not understand ancient expressions so you can't be taught. The only alternative left is to go back to when the calendar was changed or started.

There is only one reference in history that can be used and studied to try and trace calendar TIME.

Every Mason (32nd to 60th. degree), Antiquity Scientist, and Symbologist knows Julius Caesar started the Julian Calendar on the Ides of March, in the year of one TIME Serpent and one LORDS day. This is a precise TIME in civilized history. If the present Julian ended the year 6699 and is now starting the year of 6700 on January 14 1987 (Gregorian), it is a precise time in history that can be put back together. Bear in mind in the days and years of a calendar, the beginning or zero (0) has 365 days. You can't be in the year of one (1) unless 365 days have passed. This civilized or Arab method does not provide this mathematical consideration because it was meant to be a Barter system only.

But what is the date and year the Julian started?

March 15, 45 B.C. (Gregorian), March 15 4666 (Julian), and March 15, 7000 (Aztec). It is known that Julius Caesar made a 90 calendar day adjustment. The direction, i.e. was the calendar lengthen or shorten by 90 days can only be determined by when the Gregorian was put into use on September 2, and it became September 14, 1752 A.D. (6465 Julian). It appears on the surface that the calendar was shorten only 12 days. To find the correct calendar adjustment, one must understand the Julian calendar. The Julian was every bit like the Gregorian except the Julian had no months of July and August. These months became part of the Gregorian and the last two months of the Julian were dropped. Anyone that understands Latin,
