

To best understand any member of an Aboriginal or Ancient tribe you must first understand where his intellectual system permits him to evaluate from. It may not seem important to anyone who has never been taught another system or method and, which makes it impossible to understand there could be another system different then the one everyone is used to using.

Let's begin this way. Everyone in the civilized world knows there are 24 hours in one full day, both night and day. To everyone this is TIME. Before anyone can give references, they must first see light so TIME can have a reference.

Now let's take a look at how the Ancient reviews the same concept.

24 hours multiple by .99447535 = 23.867408 hours in one complete day. The difference between the two, is the time it took TIME to reach Earth, or 24 hours converted to 1,440 minutes divided by 181= 7.9558011 minutes it took TIME to travel to Earth. 7.9558011 times 180= 1,432.-442 minutes divided by 60 = 23.867402 hours in one full day.

Now let's convert the 7.9558011 minutes to seconds (times) 60= 477.34807 seconds.

Now let's say the Sun is 93 million miles way

93,000,000 divide by 477.34807 = 194,826.39 miles per second Light is traveling from the Sun to Earth. Now there is a different between what the white man says is the speed of light.

Now every Ancient knows that the Planet VENUS changes TIME by a dimension so the speed of light cannot be calculated unless you have some knowledge how this dimentional change takes place.

The Earth travel around in the Sun in orbit 584,335,740 miles in 365.242198 days or 31,556,926 seconds.

584,335,740 divide by 31,556,926 = 18.516878 miles per second

you must first understand where his intellectual system permits him to evaluate from. It may not seem important to anyone who has never been 'taught another system or method and, which makes it impossible to understand there could be another system different than the one everyone is used to using.
